

Jelli, Inc.

4 W. Fourth Avenue, Suite 206

San Mateo, CA 94402

www.jelli.net

Position: *Experienced Front-End Web Developer*

Jelli, an angel-backed startup founded by an experienced team from Amazon and Tellme, is the first web service to enable 100% user-controlled radio. Jelli combines the real-time web and crowdsourcing to allow users to take over a radio station with their browsers. Leveraging the power of the web to reinvent traditional broadcasting, Jelli empowers the community to interact with the broadcast in real-time to determine dynamically what plays on-air. Launched in 2009, Jelli is located in Downtown San Mateo near restaurants, Caltrain and major freeways.

If you enjoy social networking, the realtime web, music and digital media services, this is the place to be! Our team is excited by the phenomenal market response to the launch of our initial product offering. We are looking for engineering rockstars to help us scale our service, develop important new features and support our roll-out. We are on the lookout for experienced, energetic and startup-minded engineers.

We are searching for a Front-End Web Developer with experience building dynamic cross-browser sites. The Jelli user experience is very interactive and our site is driven by highly transient server data, so our pages rely heavily on JavaScript. Our team is small, so you will discover, discuss, design, develop, document, and maybe even destroy.

You will be responsible for:

- JavaScript, HTML, CSS and Ajax development
- Implementing cool features (we have a very long roadmap of functionality)
- Code cleanup, optimization, and refactoring (help us prepare for contribution by more engineers as the team grows)

Requirements:

- 5+ years of experience coding in JavaScript, HTML and CSS.
- Strong knowledge and experience with one of the following scripting languages: Perl, Python, Ruby or PHP.
- Bachelors Degree
- Strong problem-solving and decision-making skills
- Adept with prioritizing, organizing, and time management
- Excellent written and oral communication skills
- Team player who thrives within a fast paced startup environment

Preferred:

- Coding experience in the mobile space, for example developing a mobile site or a native application on a modern platform (iPhone, Android)

This position is a short-term contract to fulltime hire role. When applying, please be prepared to join a fun and fast paced startup!
